**The New Collar Workforce**

by Sarah Boisvert

U.S. manufacturing companies are expected to face a shortfall of two million skilled workers by the year 2020, according to reports. As a result, manufacturers and educators are looking for real, actionable ideas to train workers, reduce the shortfall and realize the potential of the new age of manufacturing.

Author Sarah Boisvert, co-founder of the commercial division of Potomac Photonics Inc., of Baltimore, Md., is an innovative leader in high-tech product commercialization and digital fabrication. In this book, she prepares those involved for transformations in the factory and offers new options for training in digital factory work.

If you hire, train or manage a manufacturing workforce; educate or parent students who are searching for a career path; or are exploring a career change, you should read this book.

**LIGHT: Introduction to Optics and Photonics, Second Edition**

by Judith F. Donnelly, Dr. Nicholas Massa

**An optics and photonics textbook**

Offering a comprehensive treatment of the subject as well as key applications, and employing minimal math, *LIGHT: Introduction to Optics and Photonics* was written with readers in mind. This textbook is for beginning students of optics and photonics in high school, community college, and university STEM courses as well as for teachers and non-optics industry professionals looking for a basic understanding of the subject.

Key topics include light, diffraction, refraction, polarization, optics, photonics, lasers and laser applications, laser safety, and fiber optics. Every topic is clearly illustrated with photographs and drawings. End-of-chapter problems are included, and a solutions manual is available to educators from the authors.
